CAREER SUMMARY

- **Data Engineer with 3+ years of experience** in designing and implementing scalable **cloud-based ETL solutions** using **Azure Data Factory** and **Azure Databricks** and **AWS**.
 - Worked in **Amazon S3** for storing and retrieving large-scale data files.
 - Designed pipelines to ingest files from **S3 bucket** into data processing systems.
 - Strong expertise in **PySpark, Apache Spark, Spark SQL, Python, AWS and SQL** for large-scale data processing and transformations.
 - Hands-on experience in building **end-to-end ETL pipelines** using Azure Data Factory to extract data from **S3** and load into target systems
 - Extensive experience with **Delta Lake** and **Medallion Architecture (Bronze, Silver, Gold)** for reliable and analytics-ready data processing.
 - Skilled in handling **Slowly Changing Dimensions (SCD Type 1 & Type 2)** to maintain historical data accuracy and **implemented incremental loads**.
 - Strong knowledge of **data modelling techniques**, including **Star and Snowflake schemas**, to support reporting and analytics and experienced in **data warehousing** concepts and **snowflake**.
 - Expertise in configuring **ADF triggers, parameterization, and pipeline monitoring** for automated and scalable workflows.
 - Proven ability to **optimize pipeline and Spark job performance**, collaborate in **Agile environments**, and manage code using **Git**.
 - Used **Spark UI** to troubleshoot Spark job failures by analyzing **stages, tasks, DAG visualization, and executor metrics**.
 - Monitored and **troubleshoot ETL pipelines** using **ADF logs and run history** and implemented triggers.
-

TECHNICAL SKILLS

- **Languages** : Python, SQL.
 - **Big Data** : Apache Spark, PySpark.
 - **Azure Cloud Technologies** :AWS, Azure Data Factory, Azure Databricks, Azure SQL Database, ADLS Gen2.
 - **Databases** : MySQL, Oracle, PostgreSQL.
 - **Data Platform** : Snowflake, Data Warehousing.
 - **ETL** : Data Pipelines, Mapping Data Flows ,Triggers.
-

WORK EXPERIENCE

Data Engineer - Zisya Technologies Private Limited

Dec 2022 – Present

- Designed and maintained Azure-based ETL pipelines using **ADF,AWS** and **Databricks**
 - Implemented **incremental loads, CDC, and SCD Type 1 & 2**
 - Optimized Spark jobs improving performance by ~30%
 - Monitored and troubleshoot pipelines using **ADF logs and Spark UI**
 - Implemented **Delta Lake Medallion architecture** for analytics-ready data
 - Developed PySpark transformations for large-scale data processing
 - Worked in **Agile teams** to deliver scalable data solutions
 - Processed **10M+ records daily** using PySpark
 - Managed **15+ production pipelines** in ADF.
-

PROJECTS

Client : Highmark Health

Project Name : Enterprise Health Solutions

Role : Data Engineer

Environment : Azure Data Factory, Azure Databricks , Pyspark, AWS

Description : Highmark Health is a large healthcare organization managing high volumes of claims, member, provider, and clinical data. The Enterprise Health Solutions project focused on building a scalable cloud-based data platform to support healthcare analytics, reporting, and regulatory requirements. Data was ingested from on-premises systems and cloud sources using Azure Data Factory and processed using Azure Databricks with PySpark. The solution implemented a Delta Lake-based Medallion architecture (Bronze, Silver, Gold) to enable incremental processing, data quality enforcement, and analytics-ready datasets for downstream reporting and business insights.

Roles & Responsibilities :

- Experience in building and enhancing data pipelines using Azure Data Factory (ADF) with various sources, sinks, linked services, datasets, and data flows.
 - Strong knowledge of parameterization for scalable and reusable ADF pipelines.
 - Skilled in reading and writing data using Azure Data Lake.
 - Integrated data from multiple sources using Copy Data activity and applied transformations via Databricks.
 - Created and managed scheduled triggers for automated pipeline execution.
 - Worked with ADF activities like Copy, Execute Pipeline, Get Metadata, If Condition, Lookup, Set Variable, Filter, and For Each for cloud-based ETL
 - Contributed to pipeline enhancements, deployments for reliable data operations.
-

Client : Magma General Insurance Limited+

Project Name : Insurance Data Warehouse Modernization

Role : Data Engineer

Environment : Azure Data Factory , Azure Databricks , Pyspark, AWS.

Description: Magma General Insurance Limited is a leading general insurance provider offering motor, health, and commercial insurance products. The project focused on analyzing core insurance data including policy issuance, renewals, claims, premiums, and customer information to support underwriting and claims operations. It enabled insights into policy performance, claims trends, loss ratios, and customer behaviour for data-driven decision-making

Roles & Responsibilities:

- Extracted data from various sources using Azure Data Factory (ADF) and stored it in Azure Data Lake Storage (ADLS) for further processing.
 - Read and processed raw data in Azure Databricks, performing transformations using PySpark and SQL operations.
 - Created Dimension and Fact tables from transformed data and loaded them into the Data Warehouse to support downstream analytics and reporting.
 - Implemented daily pipeline activity logging using Script Activity to track execution details for auditing and troubleshooting.
 - Designed and implemented end-to-end ETL pipelines in Azure Data Factory, incorporating Scheduled triggers for automated daily process
-

EDUCATION

Royalaseema University , Kurnool

B.sc in Computer Science

90%
